

LIST OF LAB EXPERIMENTS

ACADEMIC YEAR: 2022- 2023

DEPARTMENT: COMPUTER ENGG.

DATE : 14/07/2022

CLASS : T.E

SEMESTER : I

SUBJECT : Database Management System Lab

LAB Expt. No.	PROBLEM STATEMENT
	Group A:SQL and PL/SQL (Mandatory)
1.	ER Modeling and Normalization: Decide a case study related to real time application in group of 2-3 students and formulate a problem statement for application to be developed. Propose a Conceptual Design using Er features using tools like ERD plus, ER Win etc. (Identifying entities, relationships between entities, attributes, keys, cardinalities, generalization, specialization etc.) Convert the ER diagram into relational tables and normalize Relational data model.
2.	SQL Queries: a. Design and Develop SQL DDL statements which demonstrate the use of SQL objects such as Table, View, Index, Sequence, Synonym, different constraints etc. b. Write at least 10 SQL queries on the suitable database application using SQL DML statements.
3.	SQL Queries all types of Join, Sub-Query and View: Write at least 10 SQL queries for suitable database application using SQL DML statements.

4.	<p>Unnamed PL/SQL code block : Use of Control structure and Exception handling is mandatory.</p> <p>Problem statement:</p> <p>Consider Tables:</p> <ol style="list-style-type: none"> 1. Borrower(Roll_no,Name,Date of Issue,Name of Book,Status) 2. Fine(Roll_no,Date,Amt) <ul style="list-style-type: none"> • Accept Roll_no and Name of Book from user. 3. Check the number of days (from date of issue). <ul style="list-style-type: none"> • If days are between 15 to 30 then fine amount will be Rs 5 per day. • If no of days >30, per day fine will be Rs 50 per day and for days less than 30, Rs.5 per day. • After submitting the book, status will change from I to R. • If condition offline is true, then details will be stored into fine table. • Also handles the exception by named exception handler or user define exception handler. <p style="text-align: center;">OR</p> <p>Write a PL/SQL code block to calculate the area of a circle for a value of radius-varying from 5 to 9. Store the radius and the corresponding values of calculated area in an empty table named areas, consisting of two columns,radius and area.</p>
5.	<p>Named PL/SQL Block:PL/SQL Stored Procedure and Stored Function.</p> <p>Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored by students in examination is <=1500 and marks >=990 then student will be placed in distinction category if marks scored are between 989 and 900 category is first class, if marks 899 and 825 category is Higher Second Class.</p> <p>Write a PL/SQL block to use procedure created with above requirement.</p> <p>Stud_Marks(name,total_marks)Result(Roll,Name,Class)</p>
6.	<p>Cursors: (All types: Implicit, Explicit, Cursor FOR Loop, Parameterized Cursor)</p> <p>Write a PL/SQL block of code using parameterized Cursor, that will merge the data available in the newly created table N_EmpId with the data available in the table O_EmpId.</p> <p>If the data in the first table already exist in the second table then that data should be skipped.</p>
7.	<p>Database Trigger (All Types: Row level and Statement level triggers, Before and After Triggers).</p> <p>Write a database trigger on Library table. The System should keep track of the records that are being updated or deleted. The old value of updated or deleted records should be added in Library_Audit table.</p>
8	<p>Database Connectivity:</p> <p>Write a program to implement My SQL/Oracle database connectivity with any front end language to implement Database navigation operations(add,delete,edit etc.)</p>
	Group B:No SQL Databases (Mandatory)
1.	<p>Mongo DB Queries:</p> <p>Design and Develop Mongo DB Queries using CRUD operations.(Use CRUD operations,SAVE method, logical operators etc.).</p>

2.	MongoDB Aggregation and Indexing: Design and Develop Mango DB Queries using aggregation and indexing with suitable example using MongoDB.
3.	MongoDB Map-reduces operations: Implement Map reduces operation with suitable example using MongoDB.
4.	Database Connectivity: Write a program to implement MongoDB database connectivity with any front end language to implement Database navigation operations(add,delete,edit etc.)
Group C Mini Project :	
1.	<p>Using the database concepts covered in Group A and Group B, develop an application with following details:</p> <ol style="list-style-type: none"> 1. Follow the same problem statement decided in Assignment-1 of Group A. 2. Follow the Software Development Life cycle and other concepts learn in Software Engineering Course through out the implementation. 3. Develop application considering: <ul style="list-style-type: none"> • Front End:Java/Perl/PHP/Python/Ruby/.net/any other language • Backend:MongoDB/MySQL/Oracle 4. Test and validate application using Manual / Automation testing. 5. Student should develop application in group of 2-3 students and submit the Project Report which will consist of documentation related to different phases of Software Development Life Cycle: <ul style="list-style-type: none"> • Title of the Project,Abstract,Introduction • Software Requirement Specification • Conceptual Design using ER features,Relational Model in appropriate Normalized form • Graphical User Interface,Source code • Testing document • Conclusion.
